

Double column type Features

A large sized machine with high accuracy

- All Axes Scale Feedback [X / Y / Z]
- Lubricating Oil Cooling System at the spindle head
- Cross Rail Movable Type Vertical Travel : 850 mm

In order to enable and maintain accurate positioning, the basic structure includes a box-shaped bed with a centerguide system, a wide table that enables the work piece to be positioned flexibly and a movable cross rail.

Our double columntype machines are standard equipped with scale feedback for all the axes and a lubricating oil cooling system at the spindle head.

Our company can handle special requirements

Although one of the features of the YZ Series is its open accessibility, sheet metal and covers can be added as an option when processing requires a cover.

We can suggest the best machine for our customers with due consideration of usability. Please contact us even if a desired item is not shown in our catalog.

Design focused on operability and accessibility

Centralized Control Panel

Our machines are equipped with a rotatable centralized control panel. Easy operation is possible from general operations to programmed processing.

Even though these are large-sized machines, they have optimum operability like smaller machines. These machines can handle detailed adjustment to increase work efficiency.

ATC Standard: 32 / Option: 60

- Special menu for changing tools.
- Tool changes are possible during guidance machining.
- The pot number can be specified although memory is of the randomaccess type.
- Responses to Playback include tool changes.
